

» What's Your Network Made Of?

Find Out with a Network Inventory Assessment

Has your network overgrown its boundaries? Get back in control with a Network Inventory Assessment from PC Connection. In order to keep up with the constant demand for greater bandwidth and higher speeds, many organizations have undergone rapid network expansion—without the accompanying documentation. Acquisitions and merging networks can also create uncertainty about how each asset fits into your network. PC Connection's Network Inventory Assessment can help. It provides you with a comprehensive assessment of your IT network, including discovery of the network, documentation of its current state, and a performance analysis for each appliance.

How It Works:

PC Connection's Network Inventory Assessment comprehensively documents your IT network. Get the benefits of a detailed hardware and software lifecycle analysis, as well as network performance investigation. Our assessment is designed to highlight common issues, giving you immediate resolution for most network performance problems.

PC Connection's Network Inventory Assessment documents and analyzes the key performance indicators (KPI) throughout the network and empowers decision makers with the information they need.

PC Connection's Network Inventory Assessment is the perfect way to regain control over your network. With a fully documented network, many difficult tasks become easier—including creating RFPs, planning network upgrades, and initiating network support contracts.

Completing an Assessment:

- Provides a network inventory analysis
- Analyzes network performance of each network device
- Documents the network with a Visio topology drawing

Assessment Deliverables:

- Network inventory report
- Asset report
- Visio network topology
- Detailed Windows Server analysis
- Detailed infrastructure analysis

What to Expect:

1. Kickoff call to review documents and schedule the assessment
2. Network Inventory Assessment appliance is shipped to your site and remotely installed
3. Data is gathered for 5 days
4. Validation of data by a PC Connection engineer
5. Removal and return of appliance
6. Reports generated by PC Connection
7. Final deliverables and recommendation document prepared by PC Connection
8. Executive review of findings with customer

Assessment Benefits:

- A Network Inventory Assessment provides comprehensive documentation to give you an in-depth understanding of the devices on your network and how they are deployed.
- The Visio topology drawing allows you to easily visualize your network's layout—facilitating communication, highlighting problem areas, and streamlining upgrade planning.
- Common issues are highlighted, allowing you to remediate many network performance problems.
